Experience

Backend Developer

[SlateMate](#)

June 2025 - Aug 2025

AI/ML Engineer Intern

Dec 2025 - Present

[Mechanical Design Section, Indian Institute of Technology Madras](#)

- Developed, trained, optimized, and deployed machine learning and deep learning models by performing data preprocessing, feature engineering, model evaluation, and performance tuning to build scalable AI solutions for predictive analytics and computer vision applications.

Projects

Hospital Management System V1

Built a Hospital Management System using Flask, SQLAlchemy, and SQLite featuring role-based authentication, patient and doctor management, appointment scheduling, and responsive administrative dashboards.

Placement Portal V2

Placement Portal V2 Developed a scalable placement management platform using Flask, Vue.js, Redis, and Celery to streamline campus recruitment workflows. Implemented role-based access control, student and recruiter dashboards, job posting and application tracking, eligibility filtering, caching for improved performance, and asynchronous background tasks for notifications and report generation.

Gear Oil Viscosity Predictor

Gear Oil Viscosity Predictor Built a machine learning application for gear oil viscosity prediction using Scikit-learn, achieving accurate real-time predictions through data preprocessing, feature engineering, and model deployment on Hugging Face Spaces.

CNN-Model-Volume-prediction

This project predicts the volume of liquid inside a bucket using 4 images captured from different angles. A deep learning regression model is trained to learn the relationship between visual water level patterns and actual volume. Designed and implemented a multi-angle deep learning model using PyTorch and ResNet18 to predict liquid volume from four images, achieving accurate regression-based estimation for volumes ranging from 0.25 L to 16 L with ONNX deployment support.
